

## EXPERTISE

Underwater acoustics measurements and modeling, signal processing, marine mammal acoustics, acoustical oceanography, ocean engineering

## EDUCATION

Ph.D.	<b>Electrical Engineering (Applied Ocean Sciences)</b> Scripps Institution of Oceanography & Dept. of Electrical Engineering University of California, San Diego	2002
M.S.	<b>Electrical Engineering (Electronic Circuits and Systems)</b> Dept. of Electrical Engineering University of California, San Diego	1993
B.S.	<b>Physics</b> Dept. of Physics University of Illinois, Urbana-Champaign	1991

## EMPLOYMENT

<b>President/CEO</b> Greeneridge Sciences, Inc., San Diego, CA	2013–Present
<b>Senior Research Scientist</b> Greeneridge Sciences, Inc., San Diego, CA	2008–Present
<b>Senior Scientist</b> Heat, Light, & Sound Research, Inc., La Jolla, CA	2005–2008
<b>Graduate Researcher, Staff Scientist, Postgraduate Research Oceanographer</b> Scripps Institution of Oceanography, University of California, San Diego, CA	1993–2005

## SELECTED PROJECTS

- **Pinniped Monitoring during the Navy's Missile Launch Operations, San Nicolas Island, California (2008–Present):** Project Manager and Scientist for Naval Air Warfare Center Weapons Division's acoustic monitoring of missile launches over or near pinniped haul-out sites. Launch sounds and ambient sounds were analyzed for their levels and other acoustic characteristics, and missile overflights with potential to induce temporary and permanent threshold shifts (TTS, PTS) in pinnipeds exposed to launch sounds were determined.
- **Monitoring of Industrial Sounds, Seals, and Bowhead Whales Near BP/Hilcorp's Northstar Oil Development, Beaufort Sea, Alaska (2008–Present):** Project Manager and Scientist for marine mammal and acoustic monitoring program to assess effects of oil production activities on calling bowhead whales during autumn migration, using an array of Greeneridge's Directional Autonomous Seafloor Acoustic Recorders (DASARs). Bowhead whale, bearded seal, and walrus calls, and sounds from Northstar, vessels, helicopters, and seismic airguns were recorded and analyzed.
- **Long-Term Fixed Acoustic Monitoring of Marine Mammals throughout the Life Cycle of an Offshore E&P Field Development (2016–2020):** Project Manager and Scientist for the International Association of Oil & Gas Producers' program to assess the effectiveness of passive acoustics for whale density estimation. Led the team of scientists from industry and two academic institutions in this \$578K study.
- **Kwispaa LNG Project, British Columbia, Canada (2018–2019):** Project Manager and Scientist for Sarita LNG's \$1.3M baseline underwater noise and marine mammal measurement and acoustic modeling projects, developed by Greeneridge to assess potential impacts to marine biota resulting from proposed LNG terminal construction and operation.
- **Joint Monitoring Program in the Chukchi and Beaufort Seas (2008–2017):** Scientist for a marine mammal monitoring and mitigation program to assess impacts of oil and gas exploration activities on bowhead whale migration paths using 40 DASARs up to 55 km offshore and 280 km along Alaska's North Slope. Over 3 million bowhead calls were detected and localized using manual and automated methods.
- **Acoustic Monitoring of Beluga Whale Interactions with Cook Inlet Tidal Energy Project, Cook Inlet, Alaska (2010–2014):** Scientist for a DOE-sponsored program to use passive acoustic monitoring (PAM) to determine beluga whale presence and the baseline soundscape using seafloor-mounted recorders. Detected beluga calls throughout

5.5 months of continuous recording and pioneered successful measurement of ambient noise levels in a high-current environment.

- **Acoustic Monitoring of Odontocetes at the Navy's Southern California Offshore Range (SCORE) (2007):** Scientist for Scripps Institution of Oceanography's Marine Mammal Acoustics Group's CNO N45-sponsored PAM studies, which involved field testing of the Navy's M3R PAM system in combination with boat-based visual observations. Participated in fieldwork and developed automated detection, localization, and tracking algorithms to analyze terabytes of odontocete vocalizations, allowing tracking of free-ranging dolphin pods.
- **Acoustic Modeling of Seismic Airgun Effects on Sperm Whales, Gulf of Mexico (2007):** Scientist on the MMS-sponsored Sperm Whale Seismic Study. Analyzed location data from satellite-tagged whales, developed a site-specific waveguide model, predicted received levels using ocean acoustic propagation models, and utilized an ambient noise model to establish upper bounds on whale call detection range.
